

An Example

The JuliaMono font

Code example making heavy use of Unicode from <https://github.com/JuliaArrays/StaticArrays.jl/issues/537#issuecomment-439863841>

```
function T(θ::AbstractArray,  
          C::Tuple{AbstractArray,  
                  Vararg{AbstractArray}},  
          D::Tuple{AbstractArray, Vararg{AbstractArray}})  
    ⊗ = kron  
    l = length(θ)  
    Il = SMatrix{l,l}(1.0I)  
    Im = SMatrix{1,1}(1.0I)  
    T = @SMatrix zeros(l,l)  
    N = length(D[1])  
    M, M' = D  
    Λ1, Λ2 = C  
    Λn = @MMatrix zeros(4,4)  
    e1 = @SMatrix [1.0; 0.0; 0.0]  
    e2 = @SMatrix [0.0; 1.0; 0.0]  
    for n = 1:N  
        index = SVector(1,2)  
        Λn[1:2,1:2] .= Λ1[n][index,index]  
        Λn[3:4,3:4] .= Λ2[n][index,index]  
        m = hom(M[n])  
        m' = hom(M'[n])  
        Un = (m ⊗ m')  
        ∂xun = [(e1 ⊗ m') (e2 ⊗ m') (m ⊗ e1) (m ⊗ e2)]  
        Bn = ∂xun * Λn * ∂xun'  
        Σn = θ' * Bn * θ  
        Σn-1 = inv(Σn)  
        T1 = @SMatrix zeros(Float64,l,l)  
        for k = 1:l  
            ek = Il[:,k]
```

```

         $\partial \mathbf{e}_k \Sigma_n = (\mathbf{I}_m \otimes \mathbf{e}_k') * \mathbf{B}_n * (\mathbf{I}_m \otimes \boldsymbol{\theta}) + (\mathbf{I}_m \otimes \boldsymbol{\theta}') * \mathbf{B}_n * (\mathbf{I}_m \otimes \mathbf{e}_k)$ 
        # Accumulating the result in T1 allocates memory,
        # even though the two terms in the
        # summation are both SArrays.
         $\mathbf{T}_1 = \mathbf{T}_1 + \mathbf{U}_n * \Sigma_n^{-1} * (\partial \mathbf{e}_k \Sigma_n) * \Sigma_n^{-1} * \mathbf{U}_n' * \boldsymbol{\theta} * \mathbf{e}_k'$ 
    end
     $\mathbf{T} = \mathbf{T} + \mathbf{T}_1$ 
end
T
end

```

Colored console graphs produced by Benchmarktools.jl

```
using BenchmarkTools
```

```
@benchmark sum(rand(1000))
```

BenchmarkTools.Trial: 10000 samples with 10 evaluations.

Range (min ... max):	1.175 μ s ... 144.373 μ s	GC (min ... max):	0.00% ... 94.82%
Time (median):	1.289 μ s	GC (median):	0.00%
Time (mean \pm σ):	2.108 μ s \pm 4.950 μ s	GC (mean \pm σ):	8.94% \pm 3.81%

Memory estimate: 7.94 KiB, allocs estimate: 1.

Some output using ANSI escape codes

```

println("Some tests:")
printstyled("- Red ", color=:red)
printstyled("Green ", color=:green)
print("Black and ")
printstyled("Bold underline green\n", color=:green, bold=true, underline=true)
printstyled("- Normal black for comparison\n")
printstyled("- Hidden is implemented as light/dimmed\n", hidden=true)
printstyled("- Hidden is implemented as light/dimmed\n", hidden=true, italic=true)
printstyled("- Green background\n", color=:green, reverse=true)
printstyled("- A 256 bit color\n", color=142)
printstyled("- Some italic\n", italic=true)
printstyled("- and blue bold italic\n", italic=true, bold=true, color=:blue)

```

Some tests:

- **Red** **Green** Black and **Bold underline green**
- Normal black for comparison
- Hidden is implemented as light/dimmed
- *Hidden is implemented as light/dimmed*
- **Green background**
- A 256 bit color
- Some italic
- *and blue bold italic*

Structure of floating point numbers

```
function printbitsf64(x::Float64)
    s = bitstring(x)
    printstyled(s[1], color = :blue, reverse=true)
    printstyled(s[2:12], color = :green, reverse=true)
    printstyled(s[13:end], color=:red, bold=true, reverse=true)
    print("\n")
end

printbitsf64(27.56640625)
```

[illegible]

Machine epsilon

```
Eps=0.5
while 1 != 1 + Eps
    Eps /= 2
    printbitsf64(1+Eps)
end
```

[illegible]

Errors and Warnings

```
